Engaging the community to sustain our watershed

2016 Salmon Spawning Survey Training – October 29 at the Banks Fire District Training Room, 13430 NW Main Street, Banks, OR 97106

Interested landowners and volunteers are invited to this hands-on training session with Oregon Department of Fish and Wildlife personnel on how to identify fall coho, winter steelhead trout, native cutthroat trout, spawning redds and other aquatic life in Gales Creek, its tributaries and other Tualatin basin tributaries. This is part of the spawning monitoring program ODFW and TRWC have initiated to gather information on important fish resources in the Tualatin basin. We are recruiting volunteers and landowners to conduct surveys in specified stream reaches from October 2016-December 2016 and from March 2017 through May 2017.

Classroom: Information session and volunteer training: 9:30 am until 10:45 am. **Field session:** 10:45 am – 2:00 pm in upper main stem Gales Creek. Dress for the weather. **Chest or hip waders are required for performing surveys, but not at the training.**

Benefits: This is a great chance to get hands on experience in helping collect data about fish presence in various Tualatin basin streams to help us plan projects; learn how to recognize various fish species and spawning redds; and better manage these important fish runs.
